by judicious fertilizing, and our fertilizers must be produced in large measure at home. This is important. But far more important than all else, est, the use of "cultivators," in the direction and cotton, and I am convinced that their use is no longer an experiment. I am acquaints be found in any land. The rich botthe "Malta." A few of these were ment of internal health to all who live duty while the others require to be formed waste, that has not been bene prudently and sensibly. Every facility favored. The gain in training horses ditted when grazed upon by sheep Last year a great many were used in of schools, transportation, railways of value, over those of the cheaper. The exemps with which they quest our own and adjoining counties. This and conveniences, as well as haveries, grades, is more promuned than as their droppings the beading of it in LYDIA E. PINKHAM'S year a much larger number still will are within easy reach. Yet so long as the case of most other products of the ground with their teet, and the be used. I believe confidently that within five years every planter in this section who owns a two-horse farm will use a cultivator. When these implements were first introduced by the controlled and entire production of the purposes. When these improvements were first introduced by the controlled and entire parameters. will use a cultivator. When these implements were first introduced I had my doubts. It was a long time before I gave my voice either for or against them. But I have no longer any doubt on the subject. I am satisfied that, at a moderate estimate, each "cultivator" will save the labor of at least two plow hands and one mule, and in the hands of a good workman, each one will save the labor of three hands and two mules.

Deople are ruled, controlled and encountered to the position with which specular the comparative case with the comparative case with which specular the comparative case with the comparativ

ry intelligence that cannot use one successfully. A cultivator with a complete set of
