TWO KEGS OF RUM.

They Swept an Entire Eskimo Village Out of Existence.

Late one antumn a whaler on her return voyage brought up in front of a populous village on an island in the northern part of the Bering sea. A lively trade ensued with the natives, who were anxious to make their bargains quickly and go in pursuit of the walrus which were now passing, and which every year provided the winter's food supply. But in addition to the legitimate articles of trade a couple of kegs of strong rum were put ashore, and the schooner sailed away for San Francisco with all the wealth of the village. By the time the natives had finished

the rum and got over its effects the walrus had all passed, there was no supply of food put up for the winter, and ice was beginning to drift in the sea. The result was inevitable. The next whaler that called at the 'island was able to take home an interesting collection of bones and skulls of the Eskimo type to an ethnological institution, but there was no man, woman or child left alive on the rum stricken island to tell the story of starvation and death.----From "Through the Subarctic Forest," by Washburton Pike.

The results of the work done by the various State Experiment Stations prove. onclusively to all intelligent fare ers that there is "something" in the KIND of cotton planted-that some varfeties will yield larger results than others : For instance, plant two kinds of cotton side by sioc-all manured and cultivated alike-we s e one roducing two or three times as much as another. One varie'y will make 490 pounds to the + cre, and another, right by its side, and with the same manure and ultivation, produces 1 200 pounds of cotton.

Since these are facts, all farmers ought to find out :

Ist. WHAT VARIETY IS THE BEST, and then use it.

THE CULTIVATOR highly recommends the MAMMOIH BIG BOLL COT. TON. Send in your orders at once. We have the seed and guarantee them. We are willing to send seeds for new subscribers. We beg all of our present sub-cribers to get up a club of five new subscribers and obtain the seed in this way free of cost. Every subscriber we have who raises cotton ought to make a test of THE CULTIVATOR BIG BOLL variety. This cotton is NO SHAM, has been fully tested and gives best results :

Now THE CULT.VATOR is in great earnest about this matter, and we want every ntelligent farmer within our territory to test it-and for the double reason, that if it s tried and vesults are as beneficial as we feel they will be, why then our interest in the matter will be rewarded by the improved and profitable results. We want a practical demonstration by our subscribers, and to secure it we propose this :

The great va ue of this cotton can be ascertained at a small cost-and it may be that the CHIEF REASON for your short crop is the fact that you are planting the WRONG COTTON Therefore we suggest a departure as follows :

HOW TO PRACTICALLY TEST THIS:

Take a small piece of ground ; prepare and manure all alike. Plant two rows wenty feet long in your own kind of cotton, and then two rows twenty f et long of THE CULTIVATOR MAMMOTH BIG BOLL COTTON. The four to lie by side of each other. Cultivate both exactly alike, When the crop is harve-ted in the fail, weigh the yields from the two respective varieties planted, and the result
